An extraordinary piece of London is taking shape. The 67 acres north of King’s Cross Station has been transformed into a new part of the city, with homes, shopping, offices, hotels, cultural venues, bars and restaurants. There is also a massive 26 acres of public space, including 10 new parks and squares.

In Victorian times, this area was an industrial heartland, the first intermodal transport hub combining rail, road and canal for distribution of goods. In 2000, Argent was selected to deliver a joint partnership: King’s Cross redevelopment opened to the public in 2012, and today there is a lively community of thousands of students who study the arts and fashion here.

The nine-year art programme at King’s Cross is one of England’s 20 Best Heritage-led arts programmes, helping to shape the layout of the new public spaces and public art. The development is now shaping the layout of the new public spaces, and in 2014, a new public library and Western Transit Shed is already open and managed in a way that minimises impact on the environment.

There are 19 new and refurbished office buildings at King’s Cross. All are designed, built and managed in a way that minimises impact on the environment.

WORKSPACE
An 8 million sq ft of workspace in 19 new office buildings. In 2004, the office buildings were purchased by a different architect, bringing an exciting new building creation.

SUSTAINABILITY
A new retail quarter is taking shape in King’s Cross. The 67 acres north of King’s Cross has been transformed into a new part of the city, with homes, shopping, offices, hotels, cultural venues, bars and restaurants. There is also a massive 26 acres of public space, including 10 new parks and squares.

There will be 19 new and refurbished office buildings at King’s Cross. All are designed, built and managed in a way that minimises impact on the environment.

SUSTAINABILITY
There is an exciting and interesting new development in King’s Cross, and it is vital to create a sustainable future that has minimal impact on the environment.

There are many aspects to consider, but King’s Cross has included sustainability in every part of its planning and design. From using sustainable building materials to ensuring green spaces, the development is committed to being a sustainable community.
